

Data Center Audit Reports

MagicFlex's range of Data Center audit reports bring a new level of visibility into Data Center maintenance and health. Reports include a full audit lifecycle from discovery and impact analysis to step-by-step resolution guides and verification.

CIO Perspective

Gain an unparalleled view into the inner workings of your data center performance and all the issues that are outstanding with complete impact analysis.

Gauge the data center resilience, capacity and compare your team level of maintenance to industry standards and best practices.

Many CIOs order quarterly reports for the entire data center and can review this within just a few hours.

CFO / CEO Perspective

A Data Center is a complex network of multi-vendor devices which keep your data safe and secure but require constant expert maintenance to ensure reliability.

A detailed audit report will give you the insights you require regarding capacity and resilience of your IT infrastructure and the dependency on specific types of hardware and software vendors. This gives you the edge in avoiding expensive down time later on.

Technical Team Perspective

Our reports provide a complete list of all the needed tasks required to solve both critical and pre-emptive issues as well as to help you understand the impact of upgrades to various components.

These reports also include a step-by-step resolution guide and learning resources about each issue.

Technical teams love these reports and usually order them before and after projects.

- ▶ Report as a service (no active MagicFlex software license requirements)
- ▶ Cost effective report packages for post maintenance work verification
- ▶ Industry comparisons for software upgrades and best practices
- ▶ Proactive maintenance work estimate
- ▶ Complete list of issues found with clear explanation of impact, urgency and risk
- ▶ Detailed step-by-step guide to resolve issues found
- ▶ Comprehensive best practice recommendations
- ▶ Gauge resilience, capacity bottlenecks and maintenance efficiency

The report includes a comprehensive list of Data Center device connectivity, configuration, versioning errors with step-by-step resolution recommendations
